## SKILLS

---

**LANGUAGES:** Python, Java, Node.js, TypeScript, JavaScript

**FRAMEWORKS AND SERVICES:** Express.js, React, VueJS, Docker, Kubernetes, Google Cloud, AWS, GraphQL

**PARADIGMS:** Distributed System Design, Object-oriented Programming, Test-Driven Development, Agile Development

## EXPERIENCE

---

### SENIOR SOFTWARE ENGINEER | MEDICONCEN

SEP 2020 - PRESENT

- Led a 4-person team to develop insurance claim and clinic management services, in **Go**, **Python** and **Node.js**.
- Designed and revamped legacy systems to use a distributed architecture using **Docker** and **Kubernetes**, enabling easier environment segregation, improved scalability and increasing application throughput by 1200%.

### SOFTWARE ENGINEER | WEBS S'UP

APR 2019 - JUL 2020

- Led a 3-person team to develop Document Parsing System with a **TDD** cycle which resulted in an improvement in report accuracy by 30%, and reduction of monthly report processing time from 14 days to 1 day.
- Reduced image parsing time by 90% by developing an algorithm for running post-processing and OCR services in bulk concurrently with dispatcher pattern, using **Google Cloud Functions**.
- Implemented a system capable of handling a 1000 document input parse under 2 minutes versus the requested 30 minutes time-frame.
- Created **test-suites** and **CI/CD** pipelines, increasing system stability and halving release cycle.

### SOFTWARE DEVELOPER | TIGOD

DEC 2018 - APR 2019

- Created a system in **C++** for storing and redistributing tick data from forex brokers, with a < 1 ms latency.
- Developed a back-testing suite in **Python**, which simulates forex trading with an interface for testing custom strategy with historical tick data.
- Optimized trading algorithms by using **Machine Learning** with ensemble and decision tree for predictive analysis with **Python** and **scikit-learn**.

### FREELANCE DEVELOPER | TIGOD

JUN 2015 - NOV 2018

- Designed and created a gift customizing website for a client, with a peak 100+ concurrent users. 3 more variants were created due to customer satisfaction.

## PROJECTS

---

### DOCUMENT COMPARER | TYPESCRIPT, FUNCTIONAL PROGRAMMING, GOOGLE CLOUD

FEB 2020

- Implemented as **micro-services** using **Google Cloud Functions** and **Firestore**, with asynchronous communications facilitated by **Google PubSub** and **Firebase Cloud Messaging**.
- Created a Photoshop like UI for specifying key areas in PDF for the initial training of Object Detection Models, using **SVG** with **React** and **Redux**.
- Developed an algorithm for extracting key-value datas from tabular images, by calculating and combining vertices from Google OCR and **AutoML Vision Object Detection** results.

## EDUCATION

---

### AUSTRALIAN NATIONAL UNIVERSITY

B.Eng in Software Engineering | Incomplete

SEPT 2016 - DEC 2018
